Summary

Backend Developer specializing in NestJS microservices, event-driven architecture (Kafka, Debezium), CQRS/Saga patterns, and VoIP systems (FreeSWITCH ESL, TeXML). Experienced in building REST APIs, WebSocket real-time services, and analytics modules. Familiar with Docker, GraphQL, Redis, React.js, and Next.js.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, SQL, Python, N1QL

Backend: Node.js, NestJS, Microservices, REST APIs, GraphQL, gRPC

Databases: PostgreSQL, MongoDB, Couchbase, Redis

Architecture: Kafka, Debezium, CQRS, Saga Pattern, Event-Driven Architecture

VoIP & Telephony: FreeSWITCH ESL, TeXML, Webhooks, WebSockets

Tools: Docker, Git

Frontend: React.js, Next.js

Professional Experience

Backend Developer — MediaNV, Ahmedabad, India

2025 – Present

- Built and maintained NestJS microservices; implemented Kafka + Debezium event-driven workflows for real-time CDC.
- Applied CQRS and Saga patterns for distributed transaction management across services.
- Developed PostgreSQL-backed modules for a postal transaction management platform.
- Created internal APIs for data processing and collaborated with frontend team on React.js/Next.js features.

Key Projects

Practice Analytics Module | *NestJS, Microservices, Kafka, gRPC, GraphQL, PostgreSQL, Saga Pattern*

- Built as a dedicated microservice exposing analytics data via gRPC APIs consumed through a GraphQL gateway.
- Subscribed to Kafka events published by the Appointment microservice — where each API triggers a Saga that captures domain events and publishes them to Kafka — keeping analytics in sync in real time without direct service coupling.
- Delivered productivity metrics for hygienists, providers, and operator units covering utilization, appointment throughput, and revenue per resource.

VoIP Communication Platform | *NestJS, FreeSWITCH ESL, TeXML, PostgreSQL, WebSockets*

- Orchestrated end-to-end call flows using TeXML for dynamic inbound/outbound voice routing.
- Built credential provisioning API for SIP/email onboarding and webhook API to ingest real-time call events (start, answer, end, DTMF).
- Integrated FreeSWITCH ESL for live call monitoring; implemented WebSocket server to push call status to supervisor dashboards without polling.
- Developed ROI analytics API correlating call activity with business outcomes; built APIs for scheduling, call queue management, and voicemail.

Education

Bachelor of Computer Applications (BCA)

2025 – 2028

Vivekananda Global University, Jaipur, India

Certifications

MASAI Full Stack Web Development Program (Full-time) | Certificate ID: MASAI-FT37-523
